

Abrasives In Action

From The Abrasive Solutions Company

Flexidisc

In Steel Construction Industry

'Conforming To Customer Demands'

Flexidisc is a new concept in metal blending and finishing. It incorporates all the benefits of flapdisc with the added advantage of being flexible for working on contoured surfaces or to blend welds in right angle sections.

Application

Flexidisc unique design allows the abrasive flaps to easily blend weld in a right angle, for example, where a square section post has been welded to a steel footplate. The flaps conform to the weld creating a smooth radius without the risk of undercutting or 'gouging'. Conventional flapdiscs used in the same application result in a significant wastage of product as only the outer edge of the disc is used and resin fibre discs can easily 'dig in' with its sharp edge.

PRODUCT REF: FLXZ115 60 grit Zirconium

TIP

If you are not sure which grade to use, start with a 60 grit Zirconium disc.
