

flexidisc

conforming to customer demands

The Garryson Flexidisc® is a new concept in metal finishing which answers the customer demands for a more flexible disc with good stock removal. Flexidisc® is based on flap disc technology but the novel flap construction creates a disc which will conform to contoured surfaces with over 40% greater contact area on the workpiece. Flexidisc® can produce an improved finish faster than fibre disc or Quick Change disc systems, plus the benefit of longer life ensuring time and money savings.

specification

zirconium
